

SuperGIG™ COTM

ALL NETWORKS, ALL THE TIME, ON-THE-MOVE

IP Access has created the SuperGIG™ Comms-On-The-Move (COTM) Bundle to provide access to all cellular carriers while simultaneously blending satellite to ensure the highest possible throughput and reliability while on-the-move.

This package includes all necessary components to allow access to all cellular carriers and multiple satellite connections. This bundle also includes the IP Access SuperGIG™ bandwidth package allowing your data to transit all available networks simultaneously. With SuperGIG™ you get all available networks and one simple data plan. Data buckets last for a full 12 months so you will always be ready for whatever event presents itself.

Leverage all available cellular and multiple satellite networks to provide seamless communication while on-the-move

HIGHEST POSSIBLE THROUGHPUT

By truly bonding all cellular and satellite connections we can guarantee the best possible throughput

EXTENDED REACH

This enabled solution allows communication and interoperability among devices and further extends the reach of our off-grid communications

ENHANCED NETWORK RELIABILITY

Blending different network technologies from multiple LTE and satellite networks delivers greater reliability with connection diversity

LEO EXPANDABLE

The LEO-compatible antenna offers a future-proofed platform that can be converted to a LEO configuration when available
