

Why Settle For Limited Connectivity Options When You Can Have Them All?

SuperGIG™ is the ultimate managed connectivity solution that seamlessly integrates terrestrial and space-based networks, delivering unparalleled performance and reliability. With SuperGIG™ you'll have access access to Verizon, T-Mobile, AT&T and FirstNet, as well as LEO and GEO satellite networks.

Designed to cater to the needs of public safety and enterprise critical operations, SuperGIG™ offers speeds of up to 500Mbps, ensuring uninterrupted connectivity whether on-the-move or on-the-pause.

With the added benefit of a single static public IP address, SuperGIG™ simplifies and enhances your security measures. You can rely on 24/7/365 support and a single subscription that covers all networks, making SuperGIG™ a cost-effective solution that combines exceptional performance, unmatched reliability, and extensive coverage.

BEST OF BREED TECHNOLOGIES

The SuperGIG™ Comms-On-The-Move Bundle combines the best technologies available to provide a seamless blended user experience and the highest available throughput while on-the-move.

ACCESS TO ALL NETWORKS

In mobile operations, it's often uncertain which networks will be available. With SuperGIG™, you can gain access to all networks, including satellite -- ensuring that you have the connectivity you need.

SINGLE SERVICE PLAN

With a single service plan covering all networks, including satellite, you will avoid paying for a network that is not available or not used — saving money and simplifying operations.

BILLING APPLIES SOLELY DURING USAGE

No fee is charged if the unit is offline. When the unit is active, it will utilize the data from the purchased bucket, regardless of the networks through which the data can transit.
